

Installation Services

When it comes to installing a system or process, O'Brien & Gere's flexible approach focuses on the needs of the client. We can perform either straight system installation, or coordinate the installation/construction management services required to achieve project success.

Single-source responsibility is a unique benefit that O'Brien & Gere offers within our technical core competency areas. These areas range from wastewater management, water resources, and facilities services, to environmental programs, and site/civil development.

The firm can provide straight installation services for systems that have already been designed, procured, and fabricated. In addition, O'Brien & Gere can handle the coordination and management of tasks associated with system installation.

SERVICES

- Contractor pre-qualification and selection
- Negotiations with vendors and contractors on behalf of the owner
- Installation/construction management services
- Special system packaging
- Complete on-site installation, assembly, and connection
- Pre-check of system prior to commissioning

O'Brien & Gere's services are available for systems designed and built by O'Brien & Gere, systems developed by others, or reconfigurations, upgrades, and expansions of existing systems. Consider the benefits of partnering with O'Brien & Gere. Our full-service capabilities allow us to offer complete turnkey functional systems. System integration not only improves operation and production capabilities, but also benefits the client by providing lower costs associated with future operations and maintenance.
