New York State’s Inland Geographic Response Plans

Geographic Response Plans (GRP) are location-specific plans developed to provide guidance for oil spills that occur in New York State. The GRPs are designed to enhance preparedness for incidents involving crude oil transportation. New York State’s GRPs are continuously updated, reflecting the latest information and changes in the state's infrastructure. Each GRP has a specific geographic focus, covering different areas of the state.

**PROPONENTS**

**Additional Program Components**

- The NYSDEC will update GRPs every three years.
- Counties will receive GRPs in multiple formats (pdf, jmx, mpx).
- Communities are encouraged to update GRPs on an as-needed basis.
- The NYSDEC will supply emergency response trailers to all 21 potentially affected counties.
- The NYSDEC is working to position protective boom in areas that are very important for cultural, environmental or socioeconomic reasons.
- The NYSDEC will organize GRP-based training and exercises for all 21 potentially affected counties and select major cities.
